## Junior Developer

---

### Summary

I'm a disciplined and focused junior developer with a strong problem-solving ability and excellent communication skills. I hold a certification in full-stack web development and have a good grasp of both front-end and back-end technologies, including Reactjs, HTML5, CSS, Javascript, MySQL, PHP, MongoDB, NodeJS, WordPress, and Version control(Git).

I am eager to help companies with complex problems and offer customer support when needed. I am a fast learner and use the best practices to write clean, readable code to ensure the responsiveness of applications for both desktop and mobile devices. I am able to collaborate and communicate effectively with graphic designers and fellow developers for web design features using agile methodologies to develop websites that also have mobile application features, I also have the ability to work independently.

.I am a curious learner with a passion for computer science who loves to stay abreast of developments in popular technology to constantly improve the codebase (currently learning TypeScript, AWS, and Azure certifications).
